SUMMARY

Full-stack software engineer with 5+ years of experience at Etsy and Capital One, building revenue-driving product features and enterprise platforms. Experienced with Python, PHP, React, TypeScript and Golang, and with shipping data-informed features through A/B experimentation.

EDUCATION

Washington University in St. Louis, St. Louis, Missouri, USA — Aug 2014 – Dec 2018

- Bachelor of Science and Master of Science in Computer Science

SKILLS

Languages and frameworks: Python, PHP, TypeScript/JavaScript, Node.js, React, Golang, Angular, SQL
Tools and practices: AWS, Google Cloud, CI/CD pipelines, Tableau, A/B experimentation, AI-assisted development (Claude Code)

EXPERIENCE

Software Engineer *PHP, React* — Sep 2022 – Nov 2024

Software engineer with Etsy, Seller Ads team

- Built and improved features in the Seller Ads dashboard, used by hundreds of thousands of sellers, including campaign setup, budget management, bidding controls and performance reporting
- Built a targeted dashboard prompt for sellers without ads campaigns whom our data predicted would see high return on investment from advertising, letting them launch a campaign in a few clicks. This significantly increased the number of new campaigns started.
- Launched new dashboard features as A/B experiments, measured seller adoption and engagement, and rolled successful features out to all sellers in production
- Built across the full stack, with PHP on the back end and React on the front end

Software Engineer *Golang, Angular* — Mar 2021 – Sep 2022

Software engineer with Capital One

- Maintained and added features to Capital One's commercial site
- Built back-end features, such as emailing customers after they filled out interest forms
- Created Tableau visualizations of customer data, and built a custom write-back extension so product owners could update user information directly through the visualizations
- Added new front-end components

Software Engineer *TypeScript, Node.js, React, Python* — Aug 2019 – Feb 2021

Software engineer with Capital One

- Built and maintained the Feature Platform, the enterprise platform for computing, serving and registering features for machine learning models, including back-end services written in TypeScript on Node.js
- Made key design and architecture decisions while creating the platform
- Implemented a site for users to discover, register and consume features
- Built a command-line tool for users to persist and consume features
- Maintained and deployed CI/CD pipelines for building, testing and releasing services to production on AWS
